

AWS SERVER MIGRATION SERVICE (SMS)

CANANDAIGUA
MEDICAL GROUP

aws partner
network

Canandaigua Medical Group migrates entire infrastructure to AWS using Server Migration Service (SMS).

The Challenge

Canandaigua Medical Group was acquired by Thompson Health. With this acquisition came a new building slated to open in early 2019, and their servers were approaching the end of their life. Since the acquisition, the technology systems were being merged, but there was a need to keep the legacy workloads around for a little bit longer. Canandaigua Medical Group and Thompson Health wanted to avoid buying equipment that would not be used for its full lifecycle.

The Solution

Canandaigua Medical Group migrated their entire infrastructure to Amazon Web Services (AWS). The company now runs their legacy systems in EC2 and the users' desktops in Amazon WorkSpaces. The servers were migrated before their deadline using Server Migration Service. By using AWS, Canandaigua Medical Group is able to pay just for what they use and can scale up or down, depending on business needs.

The Benefits

PAY - AS - YOU - GO

With AWS you pay only for the individual services you need, and for only as long as you need them.

RELIABLE

With AWS, you take advantage of scalable, reliable, and secure computing infrastructure.

SECURE

AWS utilized an end-to-end approach to secure + harden their infrastructure. CMG's legacy workloads are isolated from the rest of the Thompson Network.

What is AWS Server Migration Service?

SMS is an agentless service which makes it easier and faster to migrate of on-premises workloads to AWS. SMS allows you to automate, schedule, and track incremental replications of live server volumes, making it easier for you to coordinate large-scale server migrations.
